

1. Background

Current Process: BPC Admission & Enrollment

- **System Nature:** Operates as a **semi-digital process**, combining online registration with manual campus-based finalization.
- **Initial Registration:**
 - Applicants visit the official BPC website.
 - Access the **Admission (Registration)** section under the Services menu.
- **Document Submission:**
 - Applicants upload scanned copies (JPEG format) of required documents.
 - **Requirements include:** 2x2 ID photo, Report Card, and PSA Birth Certificate.
- **Administrative Verification:**
 - An Admission Officer manually reviews and verifies the uploaded digital files.
- **Examination & Interview:**
 - Degree program applicants are scheduled for a face-to-face entrance exam and interview.
- **Results & Coding:**
 - Successful applicants are issued a **Test ID** or **Enrollment Code**.
- **Final Enrollment:**
 - Applicants must physically visit the campus to submit **hard copies** of their documents to complete official enrollment.

2. Statement of the Problem

- **General Problem:** The existing web portal experiences high-latency and server instability during peak registration periods, leading to a "service unavailable" status that prevents students from completing their applications.
- **Specific Problems:**
 - **Technical Instability:** The portal frequently crashes ("Unable to handle request") during the document upload phase, likely due to poor server-side handling of large file uploads.
 - **Processing Inconsistency:** There is a significant disparity in response times. Some students receive results in days, while others wait for weeks without knowing if their application was even received or if there is an issue with their documents.
 - **Lack of Real-time Feedback:** Students are "left in the dark" after submission. The system doesn't provide a live progress bar or a "queue number" to manage expectations.

3. Proposed Solution

The group proposes an **Integrated Admission and Enrollment System** designed to handle high traffic and streamline the verification process.

- **Feature Enhancements:**
 - **Progressive Saving:** A "Draft" feature so students don't lose their data if the server times out.
 - **Automated Queueing System (FIFO):** An admin dashboard that automatically sorts applicants by the date and time of submission, ensuring a "First-In, First-Out" processing order to avoid the "weeks vs. days" delay.
 - **Real-time Status Dashboard:** A student portal where applicants can see their status (e.g., *Documents Verified*, *Scheduled for Exam*, *Enrolled*) without visiting the school.
 - **Automated Email/SMS Triggers:** Instead of an admin manually sending an email, the system should trigger an automatic notification the moment an admin clicks "Approve" or "Reject."
 - **Optimized File Handling:** Implementing chunked uploads and compression to prevent the "unable to handle request" error caused by large file transfers.

4. Target Users

- **Applicants:** Freshmen and transferees applying for admission.
- **Admission Officers:** Personnel responsible for verifying digital documents.
- **Registrar:** To manage official student records and finalize enrollment.
- **Finance/Accounting:** To assess fees and confirm payments.
- **Administrators/IT:** To monitor system health and manage news/announcements.

5. Expected Benefits

- **Efficiency:** Drastically reduces the time spent on manual verification and physical follow-ups.
- **Reliability:** Ensures that applications are submitted successfully even during high-traffic periods.
- **Data Integrity:** Centralizes all records, making it easier for the registrar to retrieve accurate data instantly.
- **Better Student Experience:** Provides transparency and convenience for students through a modern, stable interface.

6. Project Title

- **BPC iEnroll / IAEMS** *Bulacan Polytechnic College Integrated Admission and Enrollment Management System*
- BPC iEnroll: *Bulacan Polytechnic College Integrated Admission and Enrollment Management System*
